

# Child Policy Nexus Sociocultural Policy

As developmental science becomes more global, and the role of context in human development becomes more evident, it is necessary that SRCD publications provide, in addition to age, an indication of the unique characteristics of the sample and the “socioeconomic and cultural place” from which their findings originate. Accordingly, it is now required that manuscripts to be published in SRCD journals specify clearly in the appropriate section(s) (e.g., Method, Discussion) and in an abbreviated form in the Abstract: (1) the dates of data collection (if applicable); (2) the theoretically relevant characteristics of the particular sample studied, for example, but not limited to: race/ethnicity, socioeconomic status, language, sexual orientation, gender identity (inclusive of non-binary options), religion, generation, family characteristics; and (3) the place(s) from which that sample was drawn, including country, region, city, neighborhood, school, etc. and all other context variables that are relevant to the focus of the publication, except when it violates expectations of privacy and confidentiality by an institutional review board or the setting itself. Additionally, selection and recruitment procedures should be clearly specified in the Method section.

The Sociocultural Policy is the product of a recognition that current policies and practices were not reflecting the state of the scholarship in terms of addressing diversity and replicability. As such, the Sociocultural Policy reflects current gaps in the science and is a dynamic policy. The Society will conduct ongoing reviews and re-evaluations of the Sociocultural Policy’s effectiveness over time and its efficacy in advancing the Society’s strategic goals. The Sociocultural Policy, procedures, and rationale will be revisited on a biannual basis to reflect changing demographics, an increasingly global society, and relevant contemporary issues.

**Note for *Child Policy Nexus* authors:** The Sociocultural Policy applies primarily to original reports of data. When discussing existing data (e.g., in literature reviews) or in *Child Policy Nexus* papers, space limitations and the availability of information in the original research reports may be a consideration. In these cases, authors should strive to provide as much information as possible about the characteristics of samples that are relevant to the generalization and interpretation of results. Authors who are submitting to *Child Policy*

*Nexus* should consult with the Editor if they wish further guidance.
