Welcome! We are delighted that you will be joining us for what promises to be an outstanding special topic meeting in Irvine. The use of digital devices and social media is ubiquitous in the environment of 21st century children. From the moment of birth (and even in utero), children are surrounded by media and technology. This meeting will provide a forum for intellectual and interdisciplinary exchange on media and technology in development and is designed to appeal to a range of researchers from the seasoned media researcher to technology developers to developmentalists who need to understand more about the role of technology and media in children’s lives.

See you in Irvine!

1-001. Putting the Education Back in “Educational” Apps  
Speakers: Kathy Hirsh-Pasek, Roberta Michnick Golinkoff

**Abstract:** Children are in the midst of a vast, unplanned experiment, surrounded by digital technologies that were not available even five years ago. A recent survey reported that three-fourths of children under the age of 4 years had their own mobile device (Kabali et al., 2015). At the apex of this boom is the introduction of applications (“apps”) for tablets and smartphones. So-called “educational apps” – which as of December 2015 stand at 1.5 million apps in the App Store, are largely unregulated and untested. This talk offers a way to think about the potential educational impact of current and future apps. Building on decades of work from the Science of Learning, which has examined how children learn best, we abstract a set of principles for two ultimate goals. First, we aim to guide researchers, educators, and designers in evidence-based app development. Second, the creation of an evidence-based guide will contribute to setting a new standard for evaluating and selecting the most effective existing children’s apps. In short, this talk presents one way to align the design and use of educational apps with known processes of children’s learning and development and offers a framework that can be used by parents and designers alike. Apps designed to promote active, engaged, meaningful and socially interactive learning (4 pillars) within the context of a supported learning goal emerge as those that are not just called “educational” but that are truly educational.

2-002. Winning (Virtual) Friends and Influencing (Virtual) People
Speaker: Justine Cassell

Abstract: Relationships between peers are of paramount importance in children’s lives. Toy and technology companies take advantage of this fact when they build child characters for children to interact with. It might be Talk to Me Barbie, My Friend Cayla, Elmo Calls or the characters that lead children through math lessons in intelligent tutoring systems. However, are the peer relationships that are so effective among children equally effective when one member of the friendship is made of plastic? Few companies have even asked the question, nor have they examined the developmental science that might inform the implementation of a virtual peer. In this talk I propose a particular approach to the study of children’s peer relationships that can be applied to their relationships with virtual peers. I focus on that most human of relationship types - intrinsically dyadic phenomena such as rapport, friendship, intimacy, and interpersonal closeness. I rely on this approach to describe the minutiae of verbal and nonverbal behaviors that function in peers to evoke, deepen, demonstrate, and destroy peer relationships. I highlight the need for differentiating the observable behaviors from inferable underlying states by demonstrating how putatively negative behaviors may play a positive role in peer rapport. And I describe some important roles that these often neglected aspects of children’s behavior may play in learning, when the learning partner is another child, or an educational technology. Each step of the talk is illustrated by experiments that involve both human-human and human-technology interaction. I include novel approaches to designing educational technologies that can improve learning gains through rapport management. And finally, lessons are drawn both for the study of children’s behavior, and the improved design of technologies capable of engaging in interaction with people over the long-term.

Biography: Dr. Justine Cassell received a dual PhD in Developmental Psychology and Linguistics from the University of Chicago and is currently Associate Dean of Technology Strategy and Impact in the School of Computer Science at Carnegie Mellon University, where she was until 2014 Director of the Human Computer Interaction Institute. She is also co-director of CMU’s new Simon Initiative on Technology-Enhanced Learning. Cassell was faculty at Northwestern University from 2003 to 2010, where she was the founding director of the Center for Technology and Social Behavior and the joint PhD in Technology and Social Behavior. Before that she was a tenured professor at the MIT Media Lab. Cassell received the Edgerton Prize at MIT, was honored in 2008 with the “Women of Vision” award from the Anita Borg Institute, in 2011 was named to the World Economic Forum Council on AI and Robotics and Work Group on the Future of Education, and in 2012 was named a fellow of the AAAS. Cassell’s current research examines the role of sociocultural factors in technology-enhanced learning and other kinds of computer-mediated collaboration.

2-004. Developer Meets Developmentalist: Panel on Industry-Academic Partnerships
Moderator: Brown Johnson
Panelists: Mindy Brooks, Laura Gatto, Michelle Lee, Rosemarie T Truglio, Alice Wilder

Integrative Statement: The goal of this panel, comprised of leading experts in their fields, is to explore how educational media across media platforms (television, digital platforms, Apps, etc.) are developed to meet the educational learning objectives of products designed from children. The panelists will discuss their respective “production models” for how they integrate current research findings from how children learn, as well as instructional learning design principles. This 90-minute panel is designed to give a “behind the scenes” glimpse into the development process and will allow time for the participants to interact with the panel.

Chairs: Dafna Lemish, Georgene L. Troseth

Abstract: In celebrating the 10 year anniversary of the international, multi-disciplinary and multi method Journal of Children and Media, the editors put together two special issues focusing on original commentaries and analyses which spotlight the challenges and opportunities facing children and media researchers as we look to the future of our field. In this panel we present four of the three dozen big-picture contributions about what the field of children and media has accomplished in the past decade, and the topical, theoretical, and methodological challenges and controversies we need to address over the next decade.

3-002. The Class: Living and Learning in the Digital Age
Speaker: Sonia Livingstone

Abstract: What did I learn from spending over a year following around – at home and school, offline and online - a class of 13 year olds from an ordinary urban London school? I asked, what do young people want, how do they see the world, and how do they find a path through the opportunities and constraints they face in today’s highly mediated, commercialised and high-pressure society? In crucial ways, this detailed ethnographic study not only challenged popular myths about teenagers’ supposed immersion in and preference for the digital environment, it also challenged the more fundamental assumption that they seek constant connection and, further, that connections foster learning and sociality. The study therefore became an exploration of how young people use the resources available, digital and otherwise, to assert their agency and identity - both against and with their peers, both for and against learning, balancing civility and transgression in distinctive ways.

Biography: Sonia Livingstone OBE is a full professor of Social Psychology in the Department of Media and Communications at LSE. Author of 20 books and many articles, Sonia researches the opportunities and risks for children and young people afforded by digital and online technologies, focusing on media literacy, social mediations, and children’s rights in the digital age. Her new book is The Class: living and learning in the digital age (2016, with Julian Sefton-Green). Recipient of many honors, Professor Livingstone has advised the UK government, European Commission, Council of Europe and others on children’s rights and safety in the digital age. A fellow of the British Psychological Society, Royal Society for the Arts, and fellow and past President of the International Communication Association, she currently leads the projects Global Kids Online and Preparing for a Digital Future and previously directed EU Kids Online. 3-003. Diversity and Access in Children's Use of Technology and Media
Chair: L. Monique Ward

Abstract: Media hold a central spot in the lives of modern youth. Data indicate that youth use media for 7.5 hours a day, and these numbers are even higher for African American and Latino youth. Although a good deal of this time is spent with traditional media, such as television, music, and movies, newer media genres (e.g., reality TV) and platforms (e.g., social networking sites) have changed how youth experience media. Although the media serve many benefits, and are often used for relaxation, peer bonding, and personal expression, there may be some unintended consequences stemming from stereotypical portrayals or encounters with online discrimination. What are the media use patterns and concerns for today’s youth of color?
In this symposium, we address this question with four presentations representing a range of methods and constructs. In the first talk, the focus is on portrayals of Black women and men in traditional media (TV, movies, music), and their influence on the gender beliefs and self-conceptions of Black youth. The second presentation shifts to digital media, offering findings on the nature of digital technology use via a national survey of African American families. The third presentation looks more closely at in-school and out-of-school use of digital media via an ethnographic study of lower-income youth. The final presentation shares findings from a longitudinal study of online racial discrimination and adjustment among adolescents. We conclude with discussions of limitations of existing methodologies and approaches, and indicate avenues for future research.

3-017. Digital Technology and Sociality: Implications for Human Development
Speaker: Patricia Marks Greenfield

**Abstract:** Using my theory of social change and human development as a framework (Greenfield, 2009, 2015), my presentation will report on six collaborative studies at Children’s Digital Media Center @ Los Angeles. The studies employ a variety of methods - content analysis, focus group, survey, experiment, and fMRI. They explore several facets of sociality that are important for human development: cultural values, social skills, social validation, and social relationships.

**Biography:** Dr. Patricia Greenfield received her Ph. D. from Harvard University and is currently Distinguished Professor of Psychology at UCLA and Director of the Children’s Digital Media Center @ Los Angeles, a collaboration between UCLA and California State University, Los Angeles. Her central theoretical and research interest is in the relationship between culture and human development, particularly the effect of social change. Digital technology is a key aspect of our culture and the most important element of social change in our society. Her books include Mind and Media: The Effects of Television, Video Games, and Computers (Harvard University Press, 1984), which was translated into nine languages and was republished in 2015 as a 30th anniversary classic edition. Her research on the implications of media and technology for cognitive and social development has covered the full range of media from print, radio, and TV to video games, computers, mobile technologies, and the Internet - including teen chatrooms, MySpace, Facebook, Youtube, and Instagram. Greenfield is a past recipient of the American Association for the Advancement of Science Award for Behavioral Science Research, and has received teaching awards from UCLA and the American Psychological Association. In 2014, she was elected to the American Academy of Arts and Sciences. In 2010, she received the Bronfenbrenner Award for Lifetime Contribution to Developmental Psychology in the Service of Science and Society from the American Psychological Association and, in 2013, the Award for Distinguished Contributions to Cultural and Contextual Factors in Child Development from the Society for Research in Child Development. Her research program includes basic and applied cross- cultural projects in Los Angeles, Mexico, Israel, and China, as well as cross- species and neural investigations linking cultural processes to language, communication, cognition, and social development.

4-006. Using Technology to Understand Children and Adolescents’ Development in a Digital World
Chair: Samuel E Ehrenreich

**Abstract:** Children and adolescents are increasingly using new technologies to interact with their family and friends and consume media. Although the constantly evolving technological landscape can create challenges for social scientists attempting to understand the role of technology in child development, it also presents new opportunities to capture a variety of data and gain new insight into children and adolescents’ lives. This symposium will describe a variety of methods for using technology to understand child development.

The first presentation will describe how researchers can use mobile phones to obtain daily diary responses from adolescents to measure health and behavior. The second presentation will describe a technique for capturing adolescents’ social media communication exchanged on a variety of platforms (e.g., Facebook, Twitter, Instagram). The third presentation will present a hand-coding system for analyzing images exchanged by adolescents on Facebook and Instagram. Finally, the fourth presentation will present a machine-learning method for analyzing very large datasets of Twitter communication.

All presentations will include illustrative examples of the data that can be collected using these technological methods, and highlight how social scientists can implement these methods in their own research. Each of the presentations and the subsequent panel discussion will highlighting specific procedures, opportunities, and challenges these methods entail.

4-010. Where We’ve Been and Where We Might Go
Speaker: Ellen Wartella

Biography: Ellen A. Wartella is a leading scholar of the role of media in children’s development. She is the Al-thani Professor of Communication Studies, Chair of the Department on the National TV Violence Study (1995–1998) and a co-principal investigator of the Children's Digital Media Center project funded by the National Science Foundation (2001–2006) and the IRADS Collaborative Research: influence of Digital Media on Young Children (2006-2011 from NSF. She currently edits Social Policy Reports for the Society for Research in Child Development. She chaired the Front-of-Package Marketing study committee of the Institute of Medicine (2009-2011), served on the Advancing Progress on Obesity Prevention study committee (2011-2013) and the Study of Food Marketing and the Diets of Children and Youth (2006). She serves on the Board of Trustees of Sesame Workshop and the National Educational Advisory Board of the Children's Advertising Review Unit of the Council of Better Business Bureaus, the Board of the World Summit on Children and Media and the Board of the Public Good Projects. During 2006-2007 she was the Inaugural Fellow of the Fred Rogers Center. A fellow of the American Academy of Arts and Sciences, she is a member of the American Psychological Association, the Society for Research in Child Development and is the past President and Fellow of the International Communication Association. She received the Steven H. Chaffee Career Productivity Award from the ICA, the Distinguished Scholar Award from the National Communication Association and the Kriegbaum Under 40 Award from the Association for Education in Journalism and Mass Communication. She received the 2015 Outstanding Achievement Award for Alumni of the University of Minnesota. Ellen Wartella researches the effects of media on children and adolescents, and the impact of food marketing in the childhood obesity crisis. She is particularly interested in addressing public policy questions about children’s use of media and technology.
