Reviewer Guidelines

The *Monographs* series presents in-depth research studies and significant findings in child development and its related disciplines. Each issue consists of a single large-scale study or a group of papers on a common theme, accompanied by discussion and in many cases, outside commentary. Like all Society for Research in Child Development (SRCD) publications, the Monographs enable development specialists from many disciplines to share their data, techniques, research methods, and conclusions.

Because a monograph is lengthy and usually substantively complex, it is particularly important that the text be well organized and written clearly and precisely. Several characteristics of the manuscript contribute to the goal of clarity and precision. The introductory and concluding discussion should relate the work to issues of concern to all developmental scientists. Authors should avoid jargon and non-standard abbreviations. When using terms that prevail in some subfields, but that are not common in others, authors should briefly define the term when first introduced.

Review Time

Because manuscripts are longer than typical journal submissions, we ask reviewers submit their review within 45 days, though limited deadline extensions can be requested. Authors are notified if there is an unexpected delay.

Commentary

Accepted monographs often include a commentary in the publication. The commentary is designed to enhance the work's impact (and often is provided by one or more of the reviewers). Once a manuscript is accepted, you may be asked to provide a commentary. The editor will provide you with more information at that time.
