Welcome from the Program Chairs

Dear attendees,

Welcome to the SRCD Special Topic Meeting, *New Conceptualizations in the Study of Parenting-at-Risk*. The goal of this meeting is to bring together scholars interested in parenting when risk is present, to make progress toward a more integrated, in-depth body of knowledge. The meeting will provide an opportunity to work toward an integrated conceptual framework for parenting as a developmental process and to share innovative approaches to studying parenting risk, resiliency, and intervention. It is designed to facilitate sharing of ideas, networking among junior and senior researchers, and capacity to work toward goals and products more than our larger conferences do. We hope to foster a deeper understanding of parenting as a set of intra- and inter-personal processes, bring together researchers from different disciplinary backgrounds and perspectives, and disseminate information to a broad, interdisciplinary audience, with recommendations for policy and practice. We are delighted with the enthusiastic response to the conference announcement, including the large number of conference submissions to this singular meeting.

We call your attention to our outstanding keynote speakers. On Thursday, Ruth Feldman, Professor in the Department of Psychology and the Brain Research Center at Bar-Ilan University, will speak on “Biobehavioral Synchrony in Healthy and High Risk Parenting Contexts.” On Friday, Hiram Fitzgerald, University Distinguished Professor of Psychology at Michigan State University, will speak on “Fathers and Sons and the Risk-Resilience Continuum.” There will also be a closing Roundtable on Saturday morning.

We also call your attention to several invited events. On Thursday morning, there is a symposium on “What is the role of technology in serving parents at-risk?” and on Thursday afternoon, a symposium on “What makes for resilient parenting in the face of adversity?” On Friday morning, there is a workshop on “Using experiential sampling methods to study parenting-at-risk,” and on Friday afternoon, a roundtable on “Opportunity and challenges in studying psychopathology in parents using transdiagnostic approaches.” This is just a sampling of many wonderful sessions. We hope you find them all interesting, engaging, and inspiring.

The SRCD Special Topic Meetings are intended to provide a forum to focus in depth on specific topics. We hope that the format of this meeting facilitates discussion, inspires new ideas, and helps forge future collaboration among participants across academic, policy, and practice fields. Toward that end, we have scheduled two poster session receptions, one on Thursday night and one on Friday night, from 5 – 6:30 in the Pavilion. These sessions offer opportunities to discuss shared interests in parenting research. In addition, each day will start with coffee and a light breakfast, providing yet another opportunity for informal discussion.

Wishing all of you a great meeting experience and looking forward to seeing you!

Best wishes,

Douglas M. Teti

1-002. Behavioral Synchrony in Healthy and High Risk Parenting Contexts

Chair: Douglas Teti
Plenary Speaker: Ruth Feldman

Brief Biography: Ruth Feldman, PhD, is a professor of psychology and neuroscience at Bar-Ilan University, Israel with a joint appointment at Yale University Medical School, Child Study Center. She is the director of the developmental affective neuroscience laboratory and the community-based infancy clinic at Bar-Ilan, which serves parents and young children in the community and provides a special treatment program for maternal postpartum depression, and heads the Irving B. Harris internship program in clinical child psychology. She is the author of over 150 papers and book chapters and serves on the editorial board of high-ranking journals in child psychiatry and child development. Her research focuses on the biological basis of affiliative bonds, the development of parent-infant relationship, bio-behavioral processes of emotion regulation, the developmental origins of empathy, and the effects of early risk on children's social-emotional growth. In several longitudinal studies ranging from infancy to adolescence she examined the effects of sensitive caregiving on the development of children's social competence, moral internalization, and the capacity for empathy. She is among the first researchers to investigate the role of Oxytocin in the human affiliation system and its involvement in human parenting and romantic attachment. In numerous studies she examined the long-term effects of early disruptions to parent-infant bonding stemming from infant biological conditions, such as prematurity, maternal post-partum depression, and war-related trauma, and assessed the brain, hormonal, physiological, behavioral, and relational effects of such conditions on children's development from infancy to adolescence. Interventions for such conditions risk conditions, and the effects of touch intervention for premature infants. For over a decade she has been involved in conducting developmental research and intervention programs for Israeli and Palestinian children exposed to repeated war, terror, and violence. Ruth trained as a musician and is the mother of four daughters and a son.

1-006. What is the role of technology in serving parents at-risk? Innovative technology-based approaches to advance parent reach, parent engagement, and program implementation in evidence-based parenting programs

Chair: Shannon R. Self-Brown

Abstract. Evidence-based parent training interventions have demonstrated effectiveness for enhancing positive parenting skills, and reducing the risk for parental child maltreatment perpetration and child externalizing behavior disorders. However, the reach of these evidence-based practices to parents at risk is limited. In this symposium, three federally-funded research projects will be presented that examine the restructuring of parenting intervention delivery with cutting edge technology-assistance to enhance program reach and parental engagement.

Abstract. The specific theme of the symposium is on parents' capacities to parent competently despite current or prior adversities that might lead one to expect otherwise, and what predicts that. Work will be drawn from extant longitudinal studies to identify past and current predictors of parenting success, and will be interpreted through an adult development theoretical framework.

Abstract. This roundtable is intended to explore both the potential gains but also the inherent challenges of applying transdiagnostic and NIMH Research Domain Criteria (RDoC) approaches to psychopathology to research on parenting at risk. Discussion will focus on (1) conceptual issues including dimensional approaches to adult psychopathology, including personality pathology, exploring atypicalities in psychological processes that are associated with disorders and their implications for parenting research and (2) methodological issues, including the possibility of adapting or developing measures from adult psychopathology and the implications for studying their relation to parenting processes and, ultimately, children's development of psychopathology.
